

GEOTHON

Geothon is a dynamic and competitive event where participants tackle real-world geotechnical challenges, propose innovative solutions, and present their findings within a structured time frame. Spanning two days, the event is designed to test technical knowledge, problem-solving skills, and creativity. On the first day, participants are introduced to a geotechnical problem and provided with a detailed brief to understand the challenge and its requirements. This day serves as the foundation for brainstorming and developing initial solutions. On the second day, teams refine their ideas and present their solutions through a formal presentation comprising a minimum of 10 slides. Geothon encourages collaboration and innovation, providing participants with valuable hands-on experience in addressing practical geotechnical problems.
